

Following are instructions for installing software which will be used on Friday workshop:

1. SSH software

For windows user, you can download from <http://www.putty.org/>
For Linux and Mac user, original terminal should be enough.

1. Apply an AWS account from <https://aws.amazon.com/tw/>

This one is optional since it requires credit card number.
You can still share data from our AWS account.

1. Python Library

Please refer to the following pages based on your environment.

1. Download WuKong source code from <https://github.com/wukong-m2m/wukong-darjeeling>

For Windows 10 user, please follow the below steps to install Python library.
For other Windows version user, please find the comparable way to install library.

1. Download and install Python 2.7.12 from <https://www.python.org/downloads/>

1. Download pip package from <http://www.lfd.uci.edu/~gohlke/pythonlibs/#pip>

1. Go to Python installed folder

`cd C:\Python27`

1. Move downloaded pip package to Python installed folder

`C:\Users\<username>\Downloads\pip-8.1.2-py2.py3-none-any.whl` .

1. Run

`python.exe pip-8.1.2-py2.py3-none-any.whl/pip install pip-8.1.2-py2.py3-none-any.whl`.

1. Download and install Microsoft Visual C++ Compiler for Python 2.7

1. Add Python folder (for example, C:\Python27\) to your path (Start / Edit environment variables) as shown in the next page.

8. Install required library for running WuKong nodes
`pip install twisted python-cjson gevent netifaces`

8. Install PyAudio using pip
`pip install pyaudio`

8. Install required library for testing AWS:
`pip install AWSIoTPythonSDK`

For Mac user, please follow the below steps to install Python library.

1. Install pip

`sudo easy_install pip`

1. Install required library for running WuKong nodes

`pip install twisted python-cjson gevent netifaces`

1. Install PyAudio using pip

`brew install portaudio`

`pip install pyaudio`

1. Install required library for testing AWS:

`pip install AWSIoTPythonSDK`

For Linux user, please follow the below steps to install Python library.

1. Install pip

```
sudo apt-get install python-pip
```

1. Install required library for running WuKong nodes

```
pip install twisted python-cjson gevent netifaces
```

1. Install PyAudio using pip

Use the package manager to install PyAudio:

```
sudo apt-get install python-pyaudio
```

If the latest version of PyAudio is not available, install it using pip:

```
pip install pyaudio
```

1. Install required library for testing:

```
pip install AWSIoTPythonSDK
```
